

Why LegacySIP for Your Legacy PBX?

LegacySIP has the knowledge and expertise in SIP trunking to turn your legacy TDM PBX into a functional virtual IP-PBX.

Why do this? For starters most customers moving to LegacySIP's SIP-Trunking services will see a 35% to 50 % reduction in their telecom bill right up front.

But that's just the start. VoIP and more specifically SIP Trunking from LegacySIP can enable your enterprise for new features and functionality that are impossible to implement using conventional circuit based telephony technologies. The savings and possibilities associated with this new technology become exponential.

LegacySIP's LSA Gateways Advantage for Your Legacy PBX

LegacySIP has engineered a network gateway called the LegacySIP LSA24 T1-SIP Bridge which effectively frees your PBX from having to be hardwired to a VoIP carrier's SIP switch.

LegacySIP's LegacySIP LSA24 T1-SIP bridge allows your PBX to communicate seamlessly with all LegacySIP switches on a call by call basis.

This dynamic connection between your PBX and LegacySIP's VoIP network is done through the combined use of LegacySIP's DNS servers, advanced call routing and call distribution of its Session Border Controllers (SBCs).

To learn the details about LegacySIP's LSA24 T1-SIP bridge click here: [LSA Gateway Overview](#)

Advantages for your PBX running on the LegacySIP VoIP network are many and significant:

- **Total Redundancy** - With LegacySIP you have a totally redundant carrier at your service. Should any LegacySIP switching element fail or go out of service your PBX is automatically routed to another working switch in the matrix. It is truly 99.999% reliable.
- **High Throughput** -Since LegacySIP can dynamically spread call load equally across all the switches it has in its matrix, all call load is totally distributed and shared equally in real time. This capability makes LegacySIP one of the fastest aggregate SIP switching platforms in the business.
- **Plug & Play** -LegacySIP has developed a Plug & Play configuration setup for your PBX to work with our LSA24 T1-SIP bridge. Contact [the LegacySIP sales group](#) and see how easy it is to set up.
- **Resilient Routes** -LegacySIP has a large array of wholesale termination agreements with top tier US and international carriers. For the LegacySIP customer this translates into routes that are redundant. Any given USA or international call made with LegacySIP has a diverse path of wholesale partner carriers to choose from to route your call.

- **800** -LegacySIP has one of the best 800 toll-free products in the business that allows us to pass on great savings to you and at the same couples that savings with top quality service.
- **DIDs Covered** -LegacySIP has a flexible DID product that covers over 95% of the USA.
- **International DIDs** –LegacySIP also has a wide array of DIDs available from many international countries. Contact [LegacySIP Sales](#) for further information.

Security and Your Legacy PBX

The Internet is one of the greatest inventions of all time, but it has its downfalls. The "guys in the black hats" are out there, lurking, constantly attempting to get access to your IP-PBX system to commit fraud.

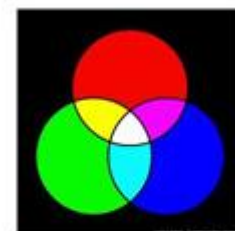

But it's easy to protect your PBX from this malicious activity if you know how. LegacySIP's VoIP service offers fraud audits as part of the service package. LegacySIP has a fraud program that limits the possibility of your PBX being hacked and hijacked to commit fraud.

- **Credit Control** -LegacySIP has automatic credit controls that prevent your account from being used beyond its normal dialing patterns, giving you further added security and safeguards.

Your PBX & LegacySIP: A Perfect Combination

Your PBX running VoIP services with LegacySIP is one of the best PBX/Carrier combinations you can make.

- **Competitive Pricing** -LegacySIP prices are very competitive, and are coupled with a VoIP architecture that goes beyond what the rest of the industry is offering.
- **Plug & Play** - If you want your PBX "to just work" go with LegacySIP. We know PBXs, and have done the upfront work to make your PBX installation with us be "Plug & Play" experience.

$$\binom{N-N_i}{n} = \frac{(N-N_i)!}{(n!((N-N_i)-n)!)}$$

So Contact the LegacySIP Sales Team Today and Learn How To...

1. **SAVE** on telecommunications costs for your PBX server
